Afeef Anver Sha

Data Scientist | Machine Learning Engineer
afeefanversha@gmail.com | +91 9539289676 | LinkedIn | GitHub

Summary

Data Scientist with hands-on experience building end-to-end **ML pipelines**, **predictive models** and **NLP systems** on real-world datasets. Skilled in feature engineering, model evaluation and **deploying ML and LLM/RAG applications**, with a strong grounding in **statistical reasoning** and **production-oriented AI workflows**.

Education

Master Diploma in Data Science & AI — *Boston Institute of Analytics* Jun 2025 – May 2026
B.Tech in AI and Data Science — *APJ Abdul Kalam Technological Univ.* Nov 2021 – Apr 2025

Experience

AI Engineer — *MIS Data Automate LLP* Feb 2026 – Oct 2026

- Designed and built **MISVector**, a **self-hosted, CPU-efficient AI analytics platform** for Indian SMEs, architected around data-privacy compliance (DPDP Act).
- Developed the core **RAG microservice** in **FastAPI, Ollama, ChromaDB, asyncpg and Redis**, with per-user vector isolation, a two-stage intent router and caching; deployed quantized **Qwen2.5** models and evaluated them for accuracy versus inference cost.
- Mentored a 3-intern team and to deliver a RAG-based **AI Note Generator and Tutor Chat** in a 14-day sprint.

Data Scienctist (On-the-Job Training) — *First Quadrant Labs* 2025 - 2026

- Contributed to production-oriented ML pipelines: preprocessing, feature engineering, training and evaluation.
- Assisted in validating and optimizing predictive models within scalable AI workflows across **public safety, healthcare, finance, and energy use cases.**

Junior AI & Automation Developer — *SMARAN AI* May 2025 – Aug 2025

- Built AI-driven workflow automation in **Python** and **Streamlit**, with ranking algorithms and real-time validation for secure project allocation.
- Integrated the **Google Sheets API** and authentication for data-driven decision systems.

Data Analyst Intern — *HostSpacio Digital Solutions* Dec 2024 – Mar 2025

- Built an **NLP fraud-detection model** that identifies fake job postings with 89% precision.
- Ran EDA and statistical validation, and automated model training, evaluation and reporting.

Projects

MISVector – Self-Hosted AI Analytics Platform for Indian SMEs 2026

- Built a **CPU-efficient agentic RAG microservice** from scratch in **FastAPI**: per-user **ChromaDB vector** isolation, a two-stage keyword intent router, and local inference with **Ollama (qwen2.5-coder:7b)**.
- Added Redis caching, asyncpg/PostgreSQL storage and a prepaid credits system; specified a tool-calling agent layer with an orchestration loop, tool registry and guardrails.

Education AI – AI Note Generator & Tutor Chat 2026

- Built a RAG-based education module **(Ollama qwen2.5:7b, ChromaDB, FastAPI, React)** in a 7-day sprint with a 3-intern team.
- Authored the platform spec, separating constraint-satisfaction tasks (timetabling, seating) from LLM tasks.

Multi-Modal RAG Question Answering System

- Built a **RAG system** over a 67-page IMF Article IV report, handling text and tables via **semantic chunking**, with FAISS retrieval across 485 chunks.
- Generated GPT-based answers with source-level citations, keeping cost under $0.10 per session. ***Stack: Python, LangChain, FAISS, OpenAI API, Streamlit.***

Generative AI Travel Chat Assistant

- Built a conversational travel assistant with validated **Prompt Flows** in **Azure AI Foundry** and **GPT-4o** deployed as a callable **Azure OpenAI** endpoint.

Technical Skills

Machine Learning: Regression, Classification, Clustering, Random Forest, SVM, XGBoost, Model Evaluation
NLP & Deep Learning: Sentiment Analysis, BiLSTM, TF-IDF, Embeddings, Text Preprocessing
GenAI & Backend: RAG, Agentic Pipelines, LangChain, FAISS, ChromaDB, Ollama, Azure AI Foundry, Azure OpenAI, FastAPI, Redis, PostgreSQL
Programming & Data: Python, SQL, Pandas, NumPy
Visualization & BI: Matplotlib, Seaborn, Power BI, Tableau
Tools & Deployment: Streamlit, Git/GitHub, Google Sheets API, REST APIs
